TOYOTA

iPod® Integration Kit

Coming soon to a glovebox near you...

A better way to plug and play

More and more people are discovering how easy it is to enjoy their music on the move thanks to the power of the iPod®. You carry all your favourite artists in your pocket already – now enjoy them in your car too.

The iPod® Integration Kit connects your iPod® directly to your Toyota's audio system, giving you fingertip control of the music while you drive. Listen to every track through your car's speakers with crystal-clear digital sound quality.

It's a must-have accessory for every music lover.

Get connected

Plug your iPod® into the discreet glovebox adapter (1) and you're ready to go. From behind the steering wheel you have full access to all the usual functions through your Toyota's audio system or steering wheel-mounted controls (2) (if fitted), including playlist select, track select, skip, repeat, and random play.

Once connected, the iPod® can remain attached to its adapter in the glovebox, keeping it safely away from prying eyes. The adapter will even charge the iPod® when needed on longer journeys.*

Keeping you in control

The car audio system display relays information from the iPod® (3), including current playlist, current track and time elapsed,** giving you full control over your music at a glance. The adapter will even match the volume level on your car's audio system to the volume level set on your iPod®.

Enjoying music on the move is so much safer with the iPod® Integration Kit. It's the easy way to get the most from your iPod®.

*Not available for older generation iPods®

**Functionality depends on the audio head-unit installed
